

European Consumables Program

For Your Everyday Labelling Needs

Our European Consumables Program allows our partners to take full advantage of our competitive discounts for our standard labels and ribbons based on the amount of volume purchased.

This means the **MORE** you buy the **MORE** you save!

We offer a wide selection of high quality labels, tags, ribbons, RFID solutions, wristbands etc. for all printer systems at competitive prices. SATO can help you choose the right consumable solution for your specific labelling requirements.

Our ECP portfolio contains the most popular labels sizes and industry standards which in combination with matching ribbons in a variety of widths provides the best media combination for your printer.

Thermal Ribbons

Our genuine SATO branded ribbons are designed to maximize the life of your printheads and provide consistent print quality.

All of SATO's ribbons are halogen-free, demonstrating our commitment to green initiatives and safety.

Our ECP Ribbons portfolio includes different sizes available from stock and ready for immediate dispatch with minimum order quantity of just one box.

Wax

Our exclusive line of wax ribbons offers excellent print quality for a variety of applications. Wax is ideal for general-purpose use and offers the best possible value.

SWX-100 (flat head) - sharp and high speed printing, perfect for short term applications on a wide range of materials (even non coated), where scratch, smudge and heat resistance is not the most important.

Application fields: Food & Beverage, Health & Beauty, Inventory & Logistics, Pharmaceutical, Retail.

Recommended for: shipping, routing, shelf and warehouse labels, price mark down.

Wax-resin

Wax-resin is a versatile, multi-purpose ribbon for challenging environments. The mix of wax and resin gives the printer an ability to print on other materials such as synthetics, coated or glossy paper stocks as well as provides protection against chemicals, smudge and smearing.

SWR-100 (flat head) - perfect for mid-term applications where durable, perfect print is required to ensure legibility for a long period of time.

Application fields: Food & Beverage, Pharma & Healthcare, Inventory & Logistics, Horticulture, Retail, Outdoor.

Recommended for: apparel hang-tags, bin labelling, plant identification, short term wristbands.

Resin

This is the best ribbon for extreme environments where high quality images and resistance against scratch, smudge, heat, liquid or chemicals is required. Resin ribbons are usually used with synthetic labels, they do not print well on paper labels.

SRS-100 (flat head) - perfect for long term application, extreme durable and diverse resin ribbon with extensive label adaptability and high speed capability.

Application fields: Automotive, Chemicals, Electronics, Outdoor, Food & Beverage, Inventory & Logistics, Pharma & Healthcare.

Recommended for: long term wristband, chemical bin and engine labelling, sea container identification, flexible packaging.

Advantages

- Competitive pricing
- Volume-based discounts for partners
- Quick ship from stock
- Minimum order quantity is 1 box only!
- A comprehensive range of consumables to meet every need
- Produced in-house using the highest quality materials to ensure optimum performance
- Versatile quality controls
- Backed by expertise in label design

**SATO Consumables =
High quality + Professional support**

Labels

Industry expertise, production capabilities and superior inventory management make SATO the preferred supplier of labels and tags.

ECP labels portfolio contains the most complete range of sizes and facing materials to provide performance, reliability and economy supporting even most critical printing.

Direct Thermal Labels

DT printing produces sharp print quality with good scannability making labels perfect for short term usage such as barcodes or shipping labels. DT does not require a thermal ribbon.

THERMAL ECO - uncoated, basic thermal material for cost-efficient labelling with no environmental resistance. We carry in ECP special labels sizes for the use as compatible shipping labels.

Applications: barcodes, shipping, dispatch and warehouse labels, weight-price scale and retail labelling.

THERMAL TOP - thermal material with top coating acting as a barrier against plasticizers, oils, humidity or smudging. Top coat layer is protected on the printer side of the label to provide higher image stability, excellent scanning properties and good scratch resistance.

Applications: food, retail, transport and logistics.

Thermal Transfer Labels

When matched with suitable media, TT technology is not only imperious to heat and moisture, but the image can't be rubbed off, making the printed label the most durable available.

By selecting the right media-ribbon combination, as well as specialty adhesive, users can create archival-quality labels to withstand temperature extremes, scratches, UV exposure, chemicals, sterilization and more.

VELLUM - Vellum Paper Labels is a smart and economical choice with very high print quality and scanning characteristics. These uncoated labels are multipurpose, particularly suitable for a wide range of applications. Vellum is an excellent economical material choice and offers exceptional print results.

Applications: retail, transport and logistics.

For decades SATO designed thermal printers so we know them inside and out. Our team rigorously tests all material and ribbon combinations to ensure high print quality, durability and maximum printhead life. We are leaders in delivering variable print excellence. It is all about **YOU & YOUR NEEDS!** Our experts understand your business and will help you choose the right consumable solution for your application.

If the size or material you require isn't held in stock, we have a custom facility for made to order supplies.
