

HPE Aruba Networking 5400R zl2 Switch Series

Key features

- Powerful HPE Aruba Networking Layer 3 modular switch series with VSF stacking, dynamic segmentation, low latency, and resiliency
- HPE Smart Rate for high-speed multi-gigabit bandwidth (IEEE 802.3bz) and PoE+ power
- Resilient with redundant management and hot swappable power supplies
- Up to 288 ports of PoE+
- Scalable line rate 40GbE for wireless traffic aggregation
- Software defined ready with REST APIs and OpenFlow support
- Advanced security and network management via HPE Aruba Networking NAC, HPE Aruba Networking Management Software and HPE Aruba Networking Central

Product overview

The HPE Aruba Networking 5400R zl2 Switch Series delivers enterprise-class resiliency with innovative flexibility and scalability for customers creating smart digital workplaces that are optimized for mobile users with an integrated wired and wireless approach. This modular series brings scalable aggregation with Virtual Switching Framework (VSF) stacking technology, hitless failover, and fast software upgrade for 5400R VSF stacks. The advanced Layer 2 and 3 feature set includes OSPF, IPv6, IPv4 BGP, Dynamic Segmentation, robust QoS, and policy-based routing with no software licensing required.

Based on a powerful ProVision ASIC, the 5400R zl2 Switch Series has a high-speed, high-capacity architecture with 2 Tbps crossbar switching fabric with low 2.1µ latency, robust feature support, and value with flexible programmability for the latest applications. This series offers flexible connectivity options with 6- or 12-slot compact chassis, line rate 40GbE, up to 96 line rate HPE Smart Rate multigigabit or 10GbE ports and up to 288 ports of PoE+ for powering access points, cameras, and IoT devices.

The 5400R is easy to deploy, use and manage using HPE Aruba Networking (Legacy) Management Software or HPE Aruba Networking Central. HPE Aruba Networking NAC offers centralized security and external captive portal support. The switches include a limited lifetime warranty.

Enhanced capabilities

Software-defined networks

- Supports multiple programmatic interfaces, including REST APIs and OpenFlow 1.0 and 1.3, to enable automation of network operations, monitoring, and troubleshooting

Unified wired and wireless support

- Supports unified wired and wireless policies using HPE Aruba Networking NAC.
- Switch auto-configuration automatically configures switch for different settings such as VLAN, CoS, PoE max power, and PoE priority when an HPE Aruba Networking access point is detected.
- User role defines a set of switch-based policies in areas such as security, authentication, and QoS. A user role can be assigned to a group of users or devices, using switch-based local user role or download from HPE Aruba Networking NAC.
- For improved network simplicity and security, HPE Aruba Networking dynamic segmentation automatically enforces user, device and application-aware policies on HPE Aruba Networking wired and wireless networks. Automated device profiling, role-based access control, and Layer 7 firewall features deliver enhanced visibility and performance for a better overall experience for both IT and end-users alike.
- Dynamic segmentation provides a secure tunnel that transports network traffic on a per-port or per-user role basis to an HPE Aruba Networking Controller. In a per-user role tunnel node, users are authenticated by the NAC which directs traffic to be tunneled to a controller or switch locally.
- Static IP visibility allows NAC to do accounting for clients with static IP addresses.

Quality of Service (QoS)

- Advanced classifier-based QoS classifies traffic using multiple match criteria based on Layer 2, 3, and 4 information; applies QoS policies such as setting priority level and rate limit to selected traffic on a per-port or per-VLAN basis
- Traffic prioritization allows real-time traffic classification into eight priority levels mapped to eight queues
- Bandwidth shaping
 - Port-based rate limiting provides per-port ingress-/egress-enforced increased bandwidth
 - Classifier-based rate limiting uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port
 - Supports per-port, per-queue egress-based reduced bandwidth
- Class of Service (CoS) sets the IEEE 802.1p priority tag based on IP address, IP Type of Service (ToS), Layer 3 protocol, TCP/UDP port number, source port, and DiffServ
- Unknown unicast rate limiting throttles unicast packets with unknown destination addresses and limits flooding on the VLAN
- RMON, XRMON, and sFlow® provide advanced monitoring and reporting capabilities for statistics, history, alarms, and events
- IEEE 802.1AB Link Layer Discovery Protocol (LLDP) advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications
- Unidirectional link detection (UDLD) monitors the link between two switches and blocks the ports on both ends of the link if the link goes down at any point between the two devices
- Management simplicity provides common software features and CLI implementation across all HPE ProVision-based switches (including the zl and yl switches)
- Command authorization leverages RADIUS to link a custom list of CLI commands to an individual network administrator's login; an audit trail documents activity
- Friendly port names allow assignment of descriptive names to ports
- Dual flash images provide independent primary and secondary operating system files for backup while upgrading
- Multiple configuration files stores easily to the flash image

Simplified configuration and management

- HPE Aruba Networking Central cloud-based management platform offers simple, secure, and cost-effective way to manage switches
- Zero touch provisioning (ZTP) simplifies installation of the switch infrastructure using HPE Aruba Networking Activate or DHCP-based process with HPE Aruba Networking (Legacy) Management Software and Central Network Management
- Flexible management—Supports both cloud-based Central and on-premises HPE Aruba Networking (Legacy) Management Software without ripping and replacing switching infrastructure
- IP SLA for Voice monitors quality of voice traffic using the UDP Jitter and UDP Jitter for VoIP tests (requires v3 modules)
- Built-in programmable and easy to use REST API interface provides configuration automation for campus networks
- Remote intelligent mirroring mirrors selected ingress/egress traffic based on ACL, port, MAC address, or VLAN to a local or remote HPE 8200 zl, 6600, 6200 yl, 5400 zl, 5400R, 3500, or 3800 Switch located anywhere on the network

Connectivity

- IEEE 802.3az Energy Efficient Ethernet lowers power consumption in periods of low link usage (supported on v2 zl 10/100/1000 and 10/100 modules)
- IEEE 802.3at Power over Ethernet (PoE+) provides up to 30W per port that allows support of the latest PoE+ capable devices such as IP phones, wireless access points, and security cameras, as well as any IEEE 802.3af-compliant end device; eliminates the cost of additional electrical cabling and circuits that would otherwise be necessary in IP phone and WLAN deployments

- Support for pre-standard PoE detects and provides power to pre-standard PoE devices
- High-density port connectivity provides up to 12 interface module slots and up to 288 wire-speed 10/100/1000 PoE-enabled ports, 96 10GbE ports or 96 HPE Smart Rate multi-gigabit ports per system
- Jumbo frames on Gigabit Ethernet and 10-Gigabit Ethernet support high performance remote backup and disaster-recovery services
- Auto-MDIX provides automatic adjustments for straight-through or crossover cables on all 10/100 and 10/100/1000 ports
- IPv6
 - IPv6 host enables switches to be managed in an IPv6 network
 - Dual stack (IPv4 and IPv6) transitions IPv4 to IPv6, supporting connectivity for both protocols
 - MLD snooping forwards IPv6 multicast traffic to the appropriate interface
 - IPv6 ACL/QoS supports ACL and QoS for IPv6 traffic
 - IPv6 routing supports static, RIPv6, OSPFv3 routing protocols
 - 6in4 tunneling supports encapsulation of IPv6 traffic in IPv4 packets
 - Security provides RA guard, DHCPv6 protection, dynamic IPv6 lockdown, and ND snooping
- Dual management modules ensure the interface and fabric continue switching traffic during an active to standby failover, providing nonstop switching and network availability that better supports critical applications such as unified communications and mobility
- Nonstop routing enhances Layer 3 high availability; OSPFv2/v3 and VRRP will continue to operate and route network traffic during failover from an active to a standby management module
- Redundant management and power provide enhanced system availability and continuity of operations
- IEEE 802.1s Multiple Spanning Tree Protocol provides high link availability in multiple VLAN environments by allowing multiple spanning trees; encompasses IEEE 802.1D Spanning Tree Protocol and IEEE 802.1w Rapid Spanning Tree Protocol
- IEEE 802.3ad Link Aggregation Control Protocol (LACP) and HPE port trunking support up to 144 trunks, each with up to eight links (ports) per trunk
- Distributed trunking enables loop-free and redundant network topology without using Spanning Tree Protocol; allows a server or switch to connect to two switches using one logical trunk for redundancy and load sharing
- Optional redundant power supply provides uninterrupted power and allows hot-swapping of the redundant power supplies when installed
- Hot-swappable modules allows dissimilar modules, and power supplies in a redundant power supply configuration to be added or swapped without interrupting the network
- Sparing simplicity with zl-common accessories (interface modules and power supplies)
- Uplink failure detection provides active-standby network path redundancy for servers that are configured for active-standby NIC teaming
- SmartLink provides easy-to-configure link redundancy of active and standby links

Performance

- High-speed, high-capacity architecture 2 Tbps crossbar switching fabric provides intra-module and inter-module switching with 785.7 million pps throughput on the purpose-built ProVision ASICs
- Selectable queue configurations allow for increased performance by selecting the number of queues and associated memory buffering that best meet the requirements of the network applications

Resiliency and high availability

- VSF creates one virtual resilient switch from two switches; servers or switches can be attached using standard LACP for automatic load balancing and high availability; simplify network operation by reduce the need for complex protocols like Spanning Tree Protocol (STP), equal-cost multipath (ECMP), and VRRP (requires v3 modules)
- Fast software upgrade reduces downtime of the VSF stack during an upgrade by sequentially upgrading the members in the stack shrinking the downtime to a few seconds (requires v3 modules)
- Virtual Router Redundancy Protocol (VRRP) allows groups of two routers to dynamically back each other up to create highly available routed environments for IPv4 and IPv6 networks

Layer 2 switching

- VXLAN support and tagging supports the IEEE 802.1Q standard and 4,094 VLANs simultaneously
- IEEE 802.1v protocol VLANs isolate select non-IPv4 protocols automatically into their own VLANs
- VLAN encapsulation (tunneling) protocol for overlay network that enables a more scalable virtual network deployment (requires v3 modules)
- GVRP and MVRP allows automatic learning and dynamic assignment of VLANs

- IEEE 802.1ad Q-in-Q increases the scalability of an Ethernet network by providing a hierarchical structure; connects multiple LANs on a high-speed campus or metro network
- MAC-based VLAN provides granular control and security; uses RADIUS to map a MAC address/user to specific VLANs (requires v2 or higher modules)
- Rapid Per-VLAN Spanning Tree (RPVST+) allows each VLAN to build a separate spanning tree to improve link bandwidth usage; is compatible with PVST+
- HPE switch meshing dynamically load balances across multiple active redundant links to increase available aggregate bandwidth; allows concurrent Layer 3 routing with v2 or higher modules
- Multiple user authentication methods
 - Uses an IEEE 802.1X supplicant on the client in conjunction with a RADIUS server to authenticate in accordance with industry standards
 - Web-based authentication provides a browser-based environment, similar to IEEE 802.1X, to authenticate clients that do not support IEEE 802.1X
 - Supports MAC-based client authentication
 - Concurrent IEEE 802.1X, web, and MAC authentication schemes per switch port accepts up to 32 sessions of IEEE 802.1X, web, and MAC authentications
- Private VLAN provides network security by restricting peer-to-peer communication to prevent a variety of malicious attacks; typically, a switch port can only communicate with other ports in the same community and/or an uplink port, regardless of VLAN ID or destination MAC address

Layer 3 services

- Bidirectional forwarding detection (BFD) enables link connectivity monitoring and reduces network convergence time for static route, OSPFv2 and VRRP (requires v3 modules)
- User Datagram Protocol (UDP) helper function allows UDP broadcasts to be directed across router interfaces to specific IP unicast or subnet broadcast addresses and prevents server spoofing for UDP services such as DHCP
- Loopback interface address defines an address in Routing Information Protocol (RIP) and Open Standard Path First (OSPF), improving diagnostic capability
- Route maps provide more control during route redistribution; allow filtering and altering of route metrics
- DHCP server centralizes and reduces the cost of IPv4 address management
- DHCP protection blocks DHCP packets from unauthorized DHCP servers, preventing denial-of-service attacks
- Secure management access delivers secure encryption of all access methods (CLI, GUI, or MIB) through SSHv2, SSL, and/or SNMPv3
- Switch CPU protection provides automatic protection against malicious network traffic trying to shut down the switch
- ICMP throttling defeats ICMP denial-of-service attacks by enabling any switch port to automatically throttle ICMP traffic
- Identity-driven ACL enables implementation of a highly granular and flexible access security policy and VLAN assignment specific to each authenticated network user

Layer 3 routing

- Static IP routing provides manually configured routing for both IPv4 and IPv6 networks
- Routing Information Protocol (RIP) provides RIPv1, RIPv2, and RIPv6 routing
- OSPF provides OSPFv2 for IPv4 routing and OSPFv3 for IPv6 routing
- Policy-based routing uses a classifier to select traffic that can be forwarded based on policy set by the network administrator (requires v2 or higher modules)
- Border Gateway Protocol (BGP) provides IPv4 Border Gateway Protocol routing, which is scalable, robust, and flexible
- STP BPDUs port protection blocks Bridge Protocol Data Units (BPDUs) on ports that do not require BPDUs, preventing forged BPDUs attacks
- Dynamic IP lockdown works with DHCP protection to block traffic from unauthorized hosts, preventing IP source address spoofing
- Dynamic ARP protection blocks ARP broadcasts from unauthorized hosts, preventing eavesdropping or theft of network data
- STP root guard protects the root bridge from malicious attacks or configuration mistakes
- Detection of malicious attacks monitors 10 types of network traffic and sends a warning when an anomaly that potentially can be caused by malicious attacks is detected

Security

- Control Plane Policing sets rate limit on control protocols to protect CPU overload from DOS attacks
- Access control lists (ACLs) provide filtering based on the IP field, source/destination IP address/subnet, and source/destination TCP/UDP port number on a per-VLAN or per-port basis
- Port security allows access only to specified MAC addresses, which can be learned or specified by the administrator
- MAC address lockout prevents particular configured MAC addresses from connecting to the network

- Source-port filtering allows only specified ports to communicate with each other
- RADIUS/TACACS+ eases switch management security administration by using a password authentication server
- Secure shell encrypts all transmitted data for secure remote CLI access over IP networks
- Secure Sockets Layer (SSL) encrypts all HTTP traffic, allowing secure access to the browser-based management GUI in the switch
- RADIUS over TLS (RadSec) allows users to use a more secure and reliable mode of communications between switch and RADIUS servers over unsecure networks
- Secure FTP allows secure file transfer to and from the switch; protects against unwanted file downloads or unauthorized copying of a switch configuration file
- Open authentication role simplifies first-time deployment of AAA in brownfield deployments by allowing full network access for failed clients and provides instant connectivity as soon as a client is plugged-in
- Critical Authentication Role ensures that important infrastructure devices such as IP phones are allowed network access even in the absence of a RADIUS server
- MAC pinning allows non-chatty legacy devices to stay authenticated by pinning client MAC addresses to the port until the clients log off or get disconnected
- Management Interface wizard helps secure management interfaces such as SNMP, telnet, SSH, SSL, web, and USB at the desired level
- Switch management logon security helps secure switch CLI logon by optionally requiring either RADIUS or TACACS+ authentication
- Security banner displays a customized security policy when users log in to the switch
- IEEE 802.1AE MACsec provides security on a link between two switch ports (1 Gbps or 10 Gbps) using standard encryption and authentication (requires v3 modules)
- Enrollment over Secure Transport (EST) enhances the switch PKI infrastructure with a simpler, scalable and more secure method of certificate provisioning, re-enrollment and renewal
- LLDP-MED (media endpoint discovery) defines a standard extension of LLDP that stores values for parameters such as QoS and VLAN to automatically configure network devices such as IP phones
- PoE allocations supports multiple methods (automatic, IEEE 802.3af class, LLDP-MED, or user-specified) to allocate PoE power for more efficient energy savings
- Auto VLAN configuration for voice
 - RADIUS VLAN uses a standard RADIUS attribute and LLDP-MED to automatically configure a VLAN for IP phones
 - CDPv2 uses CDPv2 to configure legacy IP phones
- Local MAC Authentication assigns attributes such as VLAN and QoS using locally configured profile that can be a list of MAC prefixes

Convergence

- IP multicast routing includes PIM sparse and dense modes to route IP multicast traffic
- IP multicast snooping (data-driven IGMP) prevents flooding of IP multicast traffic
- Protocol independent multicast for IPv6 supports one-to-many and many-to-many media casting use cases such as IPTV over IPv6 networks

Customer first, customer last support

When your network is important to your business, then your business needs the backing of HPE Aruba Networking Support Services. Partner with HPE Aruba Networking product experts to increase your team productivity, keep pace with technology advances, software releases, and obtain break-fix support.

HPE Foundation Care for HPE Aruba Networking support services include priority access to HPE Aruba Networking Technical Assistance Center (TAC) engineers 24x7x365, flexible hardware and on-site support options, and total coverage for HPE Aruba Networking products. HPE Aruba Networking switches with assigned HPE Aruba Networking Central subscriptions benefit with option for additional hardware support only.

HPE Aruba Networking Pro Care adds fast access to senior TAC engineers, who are assigned as a single point of contact for case management, reducing the time spent addressing and resolving issues.
