

Zebra OEMConfig

Enable your Enterprise Mobility Management (EMM) solution to support all of your Zebra mobile device features

You rely on your Enterprise Mobility Management (EMM) solution to easily and remotely configure and manage your Zebra mobile devices. But there are features in your devices that your Enterprise Mobility Management (EMM) solution doesn't support, requiring time-consuming and error-prone manual configuration — until now. With Zebra OEMConfig, your EMM now supports every feature available in your Zebra device, with no need for custom EMM integration or manual configuration.

Zebra OEMConfig is based on Android's OEMConfig standard, ensuring seamless compatibility between your Zebra devices and your EMM. This standard provides access to all of Zebra value added APIs and controls that were not previously available via your EMM. The result? Zero development required by your EMM — and no waiting for feature availability.

Give your EMM full control over all your Zebra device features with Zebra OEMConfig.

Benefits

Reduces device management time — eliminates the need for manual configuration of non-EMM supported features

Eliminates the opportunity for feature configuration errors

Provides new visibility into configuration success, protecting device performance and workforce productivity

Easy to deploy

With the unique architecture of this solution, new features on Zebra mobile devices are automatically supported in your EMM. Just install Zebra OEMConfig on your devices and you're ready to go. Every time Zebra adds a new device feature, Zebra OEMConfig will be updated to enable your EMM to instantly support it. And you can get the app through your EMM with Managed Google Play or from Zebra.com, for EMMs that support OEMConfig outside of Google Play.

Easy to use

Zebra OEMConfig couldn't be more intuitive — just click your way through the user interface to find the features you want to enable.

Ensure configuration success

Zebra OEMConfig provides administrators with the peace of mind that comes from knowing your

configurations were successfully applied. With instant visibility into any failed configurations, you can take immediate action to resolve issues, protecting device performance, device security and workforce productivity.

Total centralized control of all of your device features

With Zebra OEMConfig, you can configure hundreds of features, including device settings in Zebra's Mobility Extensions (Mx) as well as settings in other Mobility DNA tools — no proprietary integration or coding required — and no waiting for your EMM provider to add support for new features.

Standards-based for seamless support

Zebra OEMConfig works with any EMM that supports Android's OEMConfig, a standard Android Enterprise feature.

Get the most out of your EMM and your Zebra mobile device features.
