

The panel PC is equipped with the Intel® Celeron® J1900 as standard. The Ethernet interface enables individual computers or network devices such as a printer to be connected to an existing local network (LAN) (WLAN is also a possible option) or local networks to be set up completely wirelessly. Allows high-performance visual display and operation of the processes directly on site. State-of-the-art display technology provides optimum contrast even with a large viewing angle. To allow the greatest ease in utilisation the devices are available for wall, floor or table mounting. A keyboard with integrated trackball or touchpad can be connected. Windows 7® Ultimate or Windows 10 IoT Enterprise are available as possible operating systems. This means that the PCs are open for many different software packages, for example customized software or various types of commercially available standard visualisation software.
