

WEBSENTINEL PLUS INVESTIGATOR

The perfect Assistant to keep read rate at its best

Finder Pattern

Small Quiet Zone

Broken Barcode

INVESTIGATOR is the software suite performing Image Analysis within the dataset collected through **WebSentinel Plus** platform by Datalogic Industrial Barcode Readers like AV and Matrix series.

INVESTIGATOR deep dive into the considerable amount of data produced by Barcode Readers taking out value from images:

- When a No Read event occurs:
INVESTIGATOR extracts value from related Images by continuously processing them and determining, with Vision Algorithms and Artificial Intelligence, the No Read Root Cause (damaged label, printing problem, label misplaced, label not present).
WebSentinel Plus platform will save these findings, allowing automated aggregation and helping to quickly understand major No Read trends and define corrective actions.

- When a Barcode is read:
INVESTIGATOR monitors the flow of associated Printing Quality Grade and create Quality Trend reports/graphs to help Customers recognizing potentially dangerous situation before they lead to increase No Read rate.

INVESTIGATOR is extracting additional information enabling enhanced control of the Auto-ID process by recognizing quality trends and No Read Causes: this goes beyond pure barcode reading and creates new value without the necessity for specific hardware investment.

HIGHLIGHTS

- No Read Root Cause Automated aggregation in classes
- Printing Quality Trend evaluation
- Analysis Result at Parcel Level
- Reporting trends by day/hour
- Quick drill down to Image level
- Full integration within Websentinel Plus platform:
 - Individual user accounts with configurable roles and privileges
 - Web-based client
 - Cross platform server application (Windows and Linux OS)
 - Configurable alarm and event notification via email
 - Quickly 'drill-down' from enterprise to facility to scan point to device level views

TARGET MARKETS AND APPLICATIONS

- Transportation and Logistics (Postal and couriers, 3PL)
- Retail and E-Commerce (Distribution centers, Fulfillment)
- Intralogistics (Automated Warehousing)
- Automatic Warehousing
- Factory Automation (work in progress Tracking, Traceability)

BENEFITS

- Greatly reduced reaction time to Anomalous NoRead burst
- Anticipate Printing Quality degradation
- Save time of manual Image Analysis/aggregation
- Effective and precise review of processes
- Performance increase by trends analysis and root cause analysis
- Expedite response time to unwanted conditions
- Leverage Imager Barcode readers image saving capability
- Based on existing Websentinel Plus Software platform: flexibility to run on standard OS (Window 10, Linux)

TECHNICAL DATA

Software Requirements	Operating System: 64 bit Windows 10 pro or Windows Server 2016 or later, Linux on Datalogic HW or on request. Web Browsers: Internet Explorer 10 (or later), Chrome 36 (or later), Firefox 30 (or later), Java version 8
Server Hardware Recommendations	Dedicated computer with the following: <ul style="list-style-type: none">• Intel Core-i7 CPU or equivalent processor• 16 GB RAM• 1 GB hard disk free space for package data• 1 TB available disk space for images and data base (minimum)• Two 10/100/1000 MB Ethernet port• USB 2.0 port for software installation
