## STANDARD OPERATING MODES

**Eddystone**

**iBeacon**

Confidex Viking™ beacon utilizes Eddystone™ open standard frame format and/or iBeacon protocol ensuring straightforward implementation on a wide range of Bluetooth® Low Energy devices.

Confidex Viking™ Classic comes with standard parameters by default. It can be factory configured with customer specific parameters to support any 3<sup>rd</sup> party system. Confidex™ Viking can also be personalized with a custom label to ease the tag identification in the field.

Following Eddystone™ frame types are supported:

**Eddystone™-UID** frame broadcasts 16-byte Beacon ID composed of a 10-byte namespace and a 6-byte instance.

**Eddystone™-URL** frame broadcasts a URL using a compressed encoding format.

**Eddystone™-TLM** frame broadcasts telemetry information, like battery voltage and temperature.

**Eddystone™-EID** frame broadcasts an encrypted ephemeral identifier that changes periodically.

Eddystone™-EID frame operating mode requires service for resolving the ephemeral ID. Please contact Confidex for more information.

**iBeacon** advertise 16 bytes UUID, 2 bytes Major, and 2 bytes Minor.

**Accelerometer** frame (optional) is a proprietary advertising packet which broadcasts Confidex Viking™ acceleration statistics and activity.

## 3<sup>rd</sup> PARTY PLATFORM SUPPORT

Confidex Viking™ sample kits can also be ordered with pre-configured Vikings to Confidex partners ecosystems and platforms such as Quuppa, Here and Wirepas. For more information, please see the product datasheets.
